

PRE-OPTOMETRY

The college course requirements for admission to colleges of optometry are fairly uniform. All schools place emphasis on college courses in mathematics, physics, chemistry, and the biological sciences. Most students entering schools of optometry have completed a bachelor's degree. Some schools specify additional courses, such as psychology, social science, literature, philosophy, and foreign language. Students on campus desiring information should consult with the Director of Advising for Pre-Medical Healthcare Professions.
